

2 Some people think that hunting animals should be banned. In a small group or with a partner, share your ideas on the following questions.

- ▶ What arguments can you think of in favour of hunting animals?
- ▶ What arguments can you think of against hunting animals?
- ▶ Do you think hunting wild animals should be banned?
- ▶ How important is it to protect endangered species?

▼ FROM *THE EXPLORER'S DAUGHTER* BY KARI HERBERT

As a small child, Herbert lived, with her family, among the Inughuit people (sometimes called Inuits, or Eskimos) in the harsh environment of the Arctic. In 2002 she revisited the area, staying near Thule, a remote settlement in North Greenland. In this passage she writes about her experience of watching a hunt for the narwhal, a toothed whale, and what she thought and felt about it.

Two hours after the last of the hunters had returned and eaten, narwhal were spotted again, this time very close. Within an hour even those of us on shore could with the naked eye see the plumes of spray from the narwhal catching the light in a spectral play of colour. Two large pods of narwhal circled in the fjord, often looking as if they were going to merge, but always slowly, methodically passing each other by. Scrambling back up to the lookout I looked across the glittering kingdom in front of me and took a sharp intake of breath. The hunters were dotted all around the fjord. The evening light was turning butter-gold, glinting off man and whale and catching the soft billows of smoke from a lone hunter's pipe. From where we sat at the lookout it looked as though the hunters were close enough to touch the narwhal with their bare hands and yet they never moved. Distances are always deceptive in the Arctic, and I fell to wondering if the narwhal existed at all or were instead mischievous tricks of the shifting light...

The narwhal rarely stray from High Arctic waters, escaping only to the slightly more temperate waters towards the Arctic Circle in the dead of winter, but never entering the warmer southern seas. In summer the hunters of Thule are fortunate to witness the annual return of the narwhal to the Inglefield Fjord, on the side of which we now sat.

The narwhal... is an essential contributor to the survival of the hunters in the High Arctic. The mattak or blubber of the whale is rich in necessary minerals and vitamins, and in a place where the climate prohibits the growth of vegetables or fruit, this rich source of vitamin C was the one reason that the Eskimos have never suffered from scurvy... For centuries the blubber of the whales was also the only source of light and heat, and the dark rich meat is still a valuable part of the diet for both man and dogs (a single narwhal can feed a team of dogs for an entire month). Its single ivory tusk, which can grow up to six feet in length, was used for harpoon tips and handles for other hunting implements (although the ivory was found to be brittle and not hugely satisfactory as a weapon), for carving protective tupilaks, and even as a central beam for their small ancient dwellings. Strangely, the tusk seems to have little use for the narwhal itself; they do not use the tusk to break through ice as a breathing hole, nor will they use it to catch or attack prey, but rather the primary use seems to be to disturb the top of the sea bed in order to catch Arctic halibut for which they have a particular predilection. Often the ends of their tusks are worn down or even broken from such usage.

pods Small groups of whales.

fjord A long, narrow strip of the sea, between steep mountains.

mattak or blubber The fat of the whale.

scurvy A painful, weakening disease caused by lack of vitamin C.

tupilaks Charms or figures with magical powers.

predilection Liking.
